PROJECT ETHICS

Accessibility and Inclusion

- **Designed the project to make quantum computing more understandable for students and beginners.**
- **Focused on reducing barriers created by complex mathematics through visual representations of quantum logic.**
- **Promotes inclusive STEM education by making advanced concepts accessible to learners with different backgrounds and skill levels.**

Sustainability and Environmental Responsibility

- **Developed as a fully digital project, requiring no physical materials or printed resources.**
- **Runs on standard computers using open-source software, reducing the need for specialised hardware.**
- **Maintains a low environmental impact through minimal energy consumption and support for paperless learning.**

Responsible Use and Educational Value

- **Intended solely as an educational tool to support learning and exploration of quantum computing concepts.**
- **Clearly positioned as a visual learning aid rather than a commercial simulator or full quantum computing platform.**
- **Encourages open access to scientific knowledge while promoting ethical, responsible, and positive use of technology in education.**
